Software Developer

WORK EXPERIENCES

FULLERTON HEALTH • [link](#) • Frontend • Mar 2022 - Nov 2023

- Working on 7 portals serve for internal business, our project provides features that assist other departments in their work processes about insurance compensation.
- Daily meetings with other departments. Report work progress and issues to arrange work plans for the day.
- Work closely with UX/UI designers to bring their designs to product. Discuss with the designer each feature received. To create user-friendly and effective user interfaces.
- Work with a group of 3 members. Regularly share knowledge and review other members' code. By providing solutions for complex features. Help the team complete work on time
- Implementing many features with complex requirement and handle performance when page need to load large of data
- Use WebSocket to notify task take long time to completed after trigger for feature export file
- Implement responsive layout and include apply lazy load component for first load page performance
- Implement SSO authentication with secure by using Keycloak library. Handle user role, permission for each page.
- Use webpack to have full control of custom build.
- Build component library base on design system and provide document by storybook

SMARTOSC • [link](#) • Frontend • Nov 2020 - Feb 2022

1. Kids Plaza Project • [link](#)

- Work closely with product manager, business analyse, tester to delivery new checkout feature using NextJS replace old version implement by Magento framework.
- Use GraphQL for communicate with backend. Apply GraphQL codegen for generate types giving faster developer and avoid typo. AppgraphQL provides rich of useful function for fetching.
- Implement cart management like add products to the cart, quantities, and remove items. Integrating with the Magento API to fetch cart data, handle user interactions, and update the cart state accordingly.
- Implement address management, allow users to add, edit, and select shipping and billing addresses during the checkout process.
- Implement shipping methods, retrieve available shipping methods from the Magento backend via the Magento API and present them to the user during checkout.

2. Ulife Space Project • [link](#)

- I have been assigned to work solo in the frontend position of this project. My responsibilities include implement new UI layout and fixing issues in the existing code.
- Work closely business analyse and tester to analyse issue and new feature solution. Provide correctly and effective solution for client.
- Use Liquid language, JQuery, Javascript. Continue implement feature on old code using class feature of ES6 to encapsulating related functionality and providing a blueprint for creating objects with shared behavior.
- Fix issue social media sharing. Find issue when generate og tag on head tag. Give back friendly website's content appears when shared on social platforms.
